

SATTC OPIOID REFERENCES

Opioid Epidemic Resource Reference

OUR TARGET GOALS

- To develop news briefs based on this review
- Highlight a narrowed focus to race oriented approaches
- Identify gaps in literature, products, and research on opioid use disorder in regards to the current treatment of OUDs, best practices of effective treatment for providers, approaches, and modalities.

Audience: SUD professionals

"It is by going down into the abyss that we recover the treasures of life. Where you stumble, there lies your treasure."."

PRODUCTS: ASSESSMENTS

- Buprenorphine/Naloxone Maintenance Treatment Intake Questionnaire for Patient Treatment-Planning Questions

This is an intake questionnaire for people beginning medication assisted treatment.

Click Here for E-Link: opioidresponsenetwork.org/ResourceMaterials/Sample-intake-questionnaire.pdf

- Opioid Risk Tool

The Opioid Risk Tool (ORT) is a brief, self-report screening tool designed for use with adult patients in primary care settings to assess risk for opioid abuse among individuals prescribed opioids for treatment of chronic pain. Patients categorized as high-risk are at increased likelihood of future abusive drug-related behavior. The ORT can be administered and scored in less than 1 minute and has been validated in both male and female patients, but not in non-pain populations.

- PCSS Implementation Needs Assessment

The following grid serves as a guide to help identify areas of clinical and administrative work and workflow that are important to consider when adopting and implementing substance use disorder (SUD) screening and treatment into your healthcare organization, including medications for SUD. The purpose of the needs assessment is to identify available resources/assets, as well as potential barriers/challenges to successfully integrating SUD services within your organization. Answering these questions may require conversations with multiple people within your organization to fully understand processes and may require some basic data gathering (e.g., previous reports, electronic health record reports). Please complete each section as completely as possible.

- The ASSIST Project - Alcohol, Smoking and Substance Involvement Screening Test

The Alcohol, Smoking and Substance Involvement Screening Test (ASSIST) was developed for the World Health Organization (WHO) by an international group of substance abuse researchers to detect and manage substance use and related problems in primary and general medical care settings. Primary health care professionals are well-positioned to provide interventions targeted to all substances irrespective of their legal status

PRODUCTS: ASSESSMENTS

- Performance of the Tobacco, Alcohol, Prescription Medication, and Other Substance Use (TAPS) Tool for Substance Use Screening in Primary Care Patients

The Tobacco, Alcohol, Prescription medications, and other Substance [TAPS] Tool consists of a 4-item screening for tobacco use, alcohol use, prescription medication misuse, and illicit substance use in the past year and brief assessment (modified version of the ASSIST-Lite. This instrument is used to assess primary care patients for tobacco, alcohol, prescription drug, and illicit substance use and problems related to their use, and is available for self-administration and interviewer-administration to detect substance use, sub-threshold substance use disorder (i.e., at-risk, harmful, or hazardous use), and substance use disorders. The TAPS Tool was developed and validated so that health systems will have the option of using either a screen or a combined screen and brief assessment tool, as directed by the needs of their patient populations and clinical settings. The instrument is available for use in the public domain; research was supported by the National Institute on Drug Abuse. Published: 2016.

- TAPS: Tobacco, Alcohol, Prescription Medication, and Other Substance Use Tool

The Tobacco, Alcohol, Prescription medication, and other Substance use (TAPS) Tool consists of a combined screening component (TAPS-1) followed by a brief assessment (TAPS-2) for those who screen positive. This tool: * Combines screening and brief assessment for commonly used substances, eliminating the need for multiple screening and lengthy assessment tools * Provides a two-stage brief assessment adapted from the NIDA quick screen and brief assessment (adapted ASSIST-lite) * May be either self-administered directly by the patient or as an interview by a health professional * Uses an electronic format (available here as an online tool) * Uses a screening component to ask about frequency of substance use in the past year *Facilitates a brief assessment of past 90-day problem use to the patient

- Decisions in Recovery: Treatment for Opioid Use Disorder (Handbook)

This handbook provides up-to-date information on medication as one option for individuals in or seeking recovery from opioid use disorder. It encourages shared decision making between providers and peers by providing information, resources, and support related to medication-assisted treatment. This handbook can be used with an electronic decision making tool at this site:

- Implementing MAT for Opioid Use Disorder in Rural Primary Care: Environmental Scan

The purpose of this environmental scan was to build on AHRQ's previous work related to OUD by further exploring the unique factors associated with implementing MAT in rural primary care settings and the availability of tools needed to implement MAT. This report comes in two parts, both available on this website.

- TIP 43: Medication-Assisted Treatment for Opioid Addiction in Opioid Treatment Programs

This TIP, Medication-Assisted Treatment for Opioid Addiction in Opioid Treatment Programs, incorporates the many changes in medication-assisted treatment for opioid addiction (MAT) that have occurred over the most active decade of change since the inception of this treatment modality approximately 40 years ago. The TIP describes the nature and dimensions of opioid use disorders and their treatment in the United States, including basic principles of MAT and historical and regulatory developments. It presents consensus panel recommendations and evidence-based best practices for treatment of opioid addiction in opioid treatment programs (OTPs).

- WHO Guidelines for the Psychosocially Assisted Pharmacological Treatment of Opioid Dependence

The Guidelines for the Psychosocially Assisted Pharmacological Treatment of Opioid Dependence review the use of medicines such as methadone, buprenorphine, naltrexone and clonidine in combination with psychosocial support in the treatment of people dependent on heroin or other opioids. Based on systematic reviews of the literature and using the GRADE approach to determining evidence quality, the guidelines contain specific recommendations on the range of issues faced in organizing treatment systems, managing treatment programs and in treating people dependent on opioids. Published 2009

- Overcoming Data-Sharing Challenges in the Opioid Epidemic: Integrating Substance Use Disorder Treatment in Primary Care

This paper summarizes the requirements of the federal SUD confidentiality rules set forth under 42 Code of Federal Regulations (CFR) Part 2, discusses the steps that primary care practices currently take to effectively coordinate SUD care without violating the rules, suggests additional compliance strategies that might enhance data sharing, and offers for consideration modest revisions to the rules that could promote the integration of care without undermining patient privacy.
