

MARIJUANA IS THE MOST COMMON ILLICIT DRUG USED BY PREGNANT WOMEN.¹

THC (active ingredient) in marijuana can pass into breast milk where nursing infants can ingest it.³⁻⁴

OF PREGNANT WOMEN REPORT USING MARIJUANA IN THE PAST MONTH²

This publication was prepared by the Addiction Technology Transfer Center Network Coordinating Office under the cooperative agreement number 1 UR1 TI024236-02 from the Substance Abuse and Mental Health Services Administration's (SAMHSA) Center for Substance Abuse Treatment (CSAT). Its contents are solely the responsibility of the Addiction Technology Transfer Center Network Coordinating Office and do not necessarily represent the official view of the Department of Health and Human Services, SAMHSA or CSAT. TEENAGERS WHO WERE EXPOSED TO MARIJUANA IN-UTERO MAY HAVE PROBLEMS WITH PAYING ATTENTION, BRAIN FUNCTION, DOING WORK IN SCHOOL, AND LOWER IQ.⁴
