

# Telehealth Video Demonstrations

*Developed by the Northwest Addiction Technology Transfer Center (Northwest ATTC)*

## Telehealth Evidenced Based Practice (EBP) Video Demonstrations

The EBP set of demonstrations shows how a diverse set of clinical practitioners make use of EBPs in a telehealth environment, by following a mock patient, Shawn Adams, through a course of substance use disorder care, starting with a crisis, admission to IOP treatment, and a recurrence of use in outpatient treatment, and ending with connecting to a recovery coach for long term planning. The videos can be viewed as stand-alone or in sequence.

*Produced by the Northwest ATTC in co-sponsorship with the Behavioral Health Institute and with contributions from the Pacific Southwest ATTC.*

## Telehealth educations for Opioid Use Disorder (MOUD) Video Demonstrations

The MOUD set of demonstrations shows distinct clinical interactions common across the MOUD modality. Except for the first two videos, which show the mock patient from the EBP series at two more stages along his treatment trajectory, the videos in this collection are independent depictions showing different settings, patient situations, and provider types.

*Produced by the Northwest ATTC in co-sponsorship with the Southeast ATTC and the ATTC Network Coordinating Office.*
