SESSION 5 LEARNING OBJECTIVES

By the end of this two-part session, participants will be able to:

1. Describe the health impact of the three most common substances used by older adults with HIV in California.
2. Explain the impact of at least one effective strategy, including harm reduction, to address substance use issues among older adults with HIV in California.
3. Identify at least one resource available to help support older adults with HIV in California to better access substance use services.
